COMMANDPOINT SOFTWARE

Manage, Monitor, & Measure the Customer Experience

Flexible, Enterprise Software Platform

CommandPoint software gives you complete control to monitor, measure, and manage multiple digital signs and kiosk deployments anywhere, anytime, from any web-enabled PC.

Using our integrated web-based software provides businesses with an all-in-one, integrated tool for everything from activity monitoring to usage reporting to remote control of your devices. CommandPoint has the ability to be customized and offers support for direct application and database integration.

Interactive Screens and Kiosks

CommandPoint provides you the ability to track usage metrics such as session counts, generate automatic alerts such as "printer low on paper", and the ability to view both standard and customized reports online.

CommandPoint includes a full systems management suite custom developed from the ground up and tailored specifically for kiosks and digital signage.

This firewall-friendly suite of management tools gives your support team, and ours, the tools necessary to remotely troubleshoot and proactively solve most problems without the need for costly on-site service.

Digital Signage Networks

CommandPoint is the online portal to upload content, schedule playlists, create layout templates and monitor the real-time health of each player on your network. Proof-of-playback reports, player-down alerts, and download logging are all part of these user-friendly tools.

COMMANDPOINT FEATURES

- Systems management tools
- Remote control
- Content management
- Usage tracking
- Utilization reporting
- Automatic alert system
